

NEW Retro-Round™ Damper - **Model RRP**

From the company that introduced the first insertable motorized dampers over 45 years ago, comes a simple low cost slip-in round damper.

- Easy to install
 - Simply cut a 1" slot lengthwise in the duct
 - Slide the damper in
 - Secure with screws
- Plug-in wiring
- 25' modular cord included with each damper
- DC voltage low current motor
- Gasket wiper seal for minimal leakage
- L.E.D. indicator for damper position
- Up to 10 dampers per zone
- Tested to over 1,000,000 cycles
- Also available with 24VAC Motor, Model RRM

From the company that started the forced air zoning market comes the first motorized Slip-In Round Damper made specifically for retrofit. The NEW RRP damper from ZoneFirst uses a unique design to keep the damper level in the duct without the support from the

opposite end of the duct. The low voltage, low power mover is powerful enough to operate the damper yet requires a low current draw that allows up to 10 dampers per zone with a standard 40VA transformer. A built-in two color LED indicates the damper position and easily seen in across a dark attic, ceiling space or basement, simplifying system checkout.

While other companies brag about their wireless dampers, you still need to run a tube and have to pump to operate their dampers. ZoneFirst's new RRP damper provides a low cost duct damper without the pumps, tube and fittings needed to install that other system. Only ZoneFirst includes the damper wiring for all of its Plug-In Zone Dampers.

This is just another product from the leading in zoning for over 45 years.

NEW Retro-Round™ Damper - **Model RRM**

From the company that introduced the first insertable motorized dampers over 45 years ago, comes a simple low cost slip-in round damper.

- Easy to install
 - Simply cut a 1" slot lengthwise in the duct
 - Slide the damper in
 - Secure with screws
- 24VAC
- Powerful power open-power closed motor
- LED indicator
- Uses standard thermostat low voltage wiring
- No special tubing or loud pumps to control
- Low current draw for up to 20 dampers per 40VA transformer
- Daisy chain wiring - 3 wire terminal connection to each motor

From the company that started the forced air zoning market comes the first motorized Slip-In Round Damper made specifically for retrofit. The NEW RRM damper from ZoneFirst uses a unique design to keep the damper level in the duct without the support from the opposite end of the duct. The low voltage, low power mover is powerful enough to operate the

damper yet requires a low current draw that allows up to 20 dampers from a single 40VA transformer. Two built-in LEDs indicate the damper position and easily seen in across a dark attic, ceiling space or basement, simplifying system checkout.

While other companies brag about their wireless dampers, you still need to run a tube and have to pump to operate their dampers. ZoneFirst's new RRP damper provides a low cost duct damper without the pumps, tube and fittings needed to install that other system.

This is just another product from the leading in zoning for over 45 years.
